

Deposit Safe AT-Dep

AT-Dep with integrated deposit unit

Large amounts of money at the cashier's desk means a higher risk for hold-up's. Every year a lot of companies are negatively effected by higher costs due to robbery and hold-up's. All security managers agree to the fact that the best way to protect personnel and money is to keep as little cash as possible at the cashier's desk. The money should be stored in a tested security cabinet. Rosengrens AT-Dep is therefor a very good alternative.

AT-Dep is based on the comprehensive safe range Atlantic, which has been tested and certified to the European norm EN 1143-1. The deposit unit is an integrated part of the safe with the same high security level. The "pull-resistance" of the deposit drawer is very high.

High security – 24 hours deposits

The great advantage of AT-Dep is the possibility to place money in the safe while it remains locked. This means that the personnel, without access to codes or keys, can deposit money at any time day or night. It is very easy to handle. When depositing the deposit drawer is pulled out and the money is placed in a special compartment. The drawer is then closed, and the money falls down into the protected area without any chance for the person who deposited the money to reach anything in the safe.

Two grades

The AT-Dep is available in two different levels of insurance rating, I and II. Please note that AT-Dep 52, has an outer height of less than 650 mm. This eliminates all problems when installing the safe under the cashier's desk. The AT-Dep is prepared for anchoring to the floor or back wall.

Design and interior fittings

The attractive design and the colour of the safe, makes it easy to fit in a modern shop. A variety of interior fittings, e.g. different shelves, extensible drawer etc., gives the possibility to provide storage in the areas not used for deposits.

Lock options

As standard AT-Dep is equipped with our resettable keylock RKL-10 on the safe. The high security lock RKL-10 has

more than 90 million key variation possibilities. The safe can also be equipped with mechanical combination locks or electronical pin-code locks.

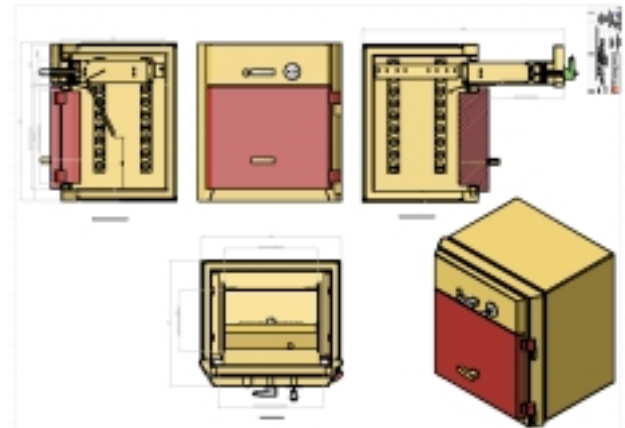

The drawer is as standard equipped with a cylinder lock but for increased security RKL-10 or LG electronic lock are options.

The deposit drawer

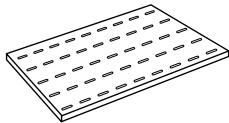

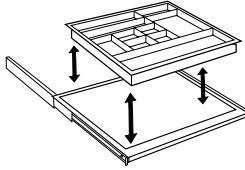

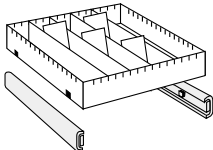

The deposit drawer is equipped with an anti-fishing device preventing any manipulation. Without compromising with the high security of the drawer, there is space left to deposit a bag as big as 88x364x236 mm (h x w x d).

Quality and environment

Gunnebo safe production units are today certified according to ISO 9001 and 14001 which guarantees top quality. Our production units are furthermore subject to external manufacturing control.
