

Rosengrens Vertical III – 31"

Two-hour fire protection of documents

Rosengrens Vertical III is a range of extremely low-weight filing cabinets offering fire protection for your documents. The cabinets are designed for strength and stability, with independently insulated drawers, an anti-tipping device and maximised capacity for contents. The 31" Vertical III is available with 2, 3 or 4 drawers and the range incorporates models for the storage of suspension files in either A4 or Folio format. A data media insert can also be fitted for the combined storage of documents and data media. The cabinets have been tested and certified to protect documents from fire for two hours.

Tilt support for bottom plate

Data media insert
Int. size 170x285x490
Ext. size 265x375x580
Volume: 24 litres

Fire protection: Rosengrens Vertical III filing cabinets have been tested and certified by SP (Swedish National Testing and Research Institute) in accordance with the NT Fire 017 standard for fire class I20 Paper. With external temperatures climbing to over 1000°C, the test procedure exposes the cabinet to fire for two hours, after which time the documents inside the cabinet remain unharmed. Should the cabinet be exposed to a fire and one of the drawers has been left open, the contents of the closed drawers still remain completely protected.

Lock: The Vertical III range offers a host of locking options. A central, high-quality key lock comes as standard, which locks all drawers simultaneously. This can be complemented by a central combination lock. In addition to central locking, key locks may be fitted to each individual drawer. The cabinets can also be equipped with an optional electronic lock. For extra protection, Vertical III filing cabinets have a day-catch fitted to each drawer. This ensures that as long as a drawer has been pushed shut, its contents are completely protected from fire, even if the cabinet is unlocked.

Design: Bearing in mind the level of protection the filing cabinets provide, Vertical III is extremely low-weight, making transportation and installation much easier and cheaper. The strong yet thin walls also maximise capacity. The cabinet has been constructed for stability with special high-strength slides allowing you to pull out the drawers to 110% without the risk of tipping. This gives you much better access to the contents of each drawer. Tipping is also prevented by an interlocking system which only allows one drawer to be open at a time.

The drawers themselves are fully insulated and have a steel-lined inner body, which means that each one and its contents are independently protected from fire and dust. With its soft edges and light grey finish, the Vertical III has been designed to blend into most office environments.

Quality and Environmental Management Systems: Vertical III filing cabinets are manufactured in accordance with ISO 9001 for quality management systems and ISO 14001 for environmental management systems.

Rosengrens Product Guidelines: The construction of Vertical III filing cabinets has been tested and approved in accordance with Rosengrens Product Guidelines, based on all relevant European standards. The aim is to check user-friendliness, safety and product lifecycle, as an assurance to customers that our products will live up to the highest expectations.
